GEN6

A Web3 trust-layer platform enabling identity verification, content signing, and encrypted communication. Designed across a marketing website and decentralised apps site.

Live · Product Designer · 3 months (2024) · GEN6 · Web (Marketing + dApps) · GEN6 Website · dApps

Summary

GEN6 is a Web3 platform built for the AI era, helping users verify creator identity and content authenticity, sign messages and media, and communicate with true end-to-end encryption.
I designed the brand identity and two connected digital experiences — a marketing website and decentralised apps site — to make a complex trust-layer product feel credible, approachable, and ready for a broad Web3 audience.

I was responsible for:

- The brand identity and visual direction, from research and stylescapes to a preliminary brand guideline.
- The design of the marketing website, communicating GEN6's vision, features, and ecosystem across multiple pages.
- The design of the dapps site, including information architecture, wireframing, and full UI design for identity verification and content signing flows.
- A shared component library and design system in collaboration with the development team.

Building what blockchain is good for

Welcome to Life in Gen6 - where real people, real experiences, and verification come together.

A Privacy Ecosystem Designed for Truth

Host and attend verifiable events, build human-first communities, and store truth on-chain, all in one connected space.

Problem

No brand foundation

GEN6 had no brand identity, visual language, or strategic foundation to present a complex Web3 product to a broad audience.

Two digital presences needed

The product needed two distinct but cohesive digital presences: a marketing site and a dapps interface for technical users.

Trust vs. approachability

The design had to build trust and credibility while remaining approachable — a difficult balance in a category often associated with complexity.

High cognitive load

UI clutter slowed users down and made the payment flow feel heavier.

Process

1. Conducted brand and market research to establish the visual and strategic direction for a Web3 identity product.

Title page- Large	Title page- Large line height	PP Neue Corp	Normal Medium	56px	120%	0%
Title page- Base	Title page- medium line height	PP Neue Corp	Normal Medium	48px	120%	0%
Title page- Small	Title page- Small Line height	PP Neue Corp	Normal Medium	32px	120%	0%
Title page- Extra small	Title page- Extra small Line height	PP Neue Corp	Normal Medium	24px	120%	0%
Subtitle- Large	Subtitle- Large Line height	PP Neue Corp	Normal Medium	36px	120%	0%

2. Presented multiple stylescape options and refined the chosen direction into a preliminary brand guideline.

Solution

Comprehensive brand identity and brand guideline suited to a Web3 audience.

This gave the platform a clear foundation for marketing and product experiences.

Outcome

Two live websites serving 30,000+ users across the GEN6 ecosystem

- Both websites live and in active use.
- 30,000+ users across the GEN6 ecosystem.
- 140+ validators securing the network.
- $1.5M+ raised across community funding and grants.
