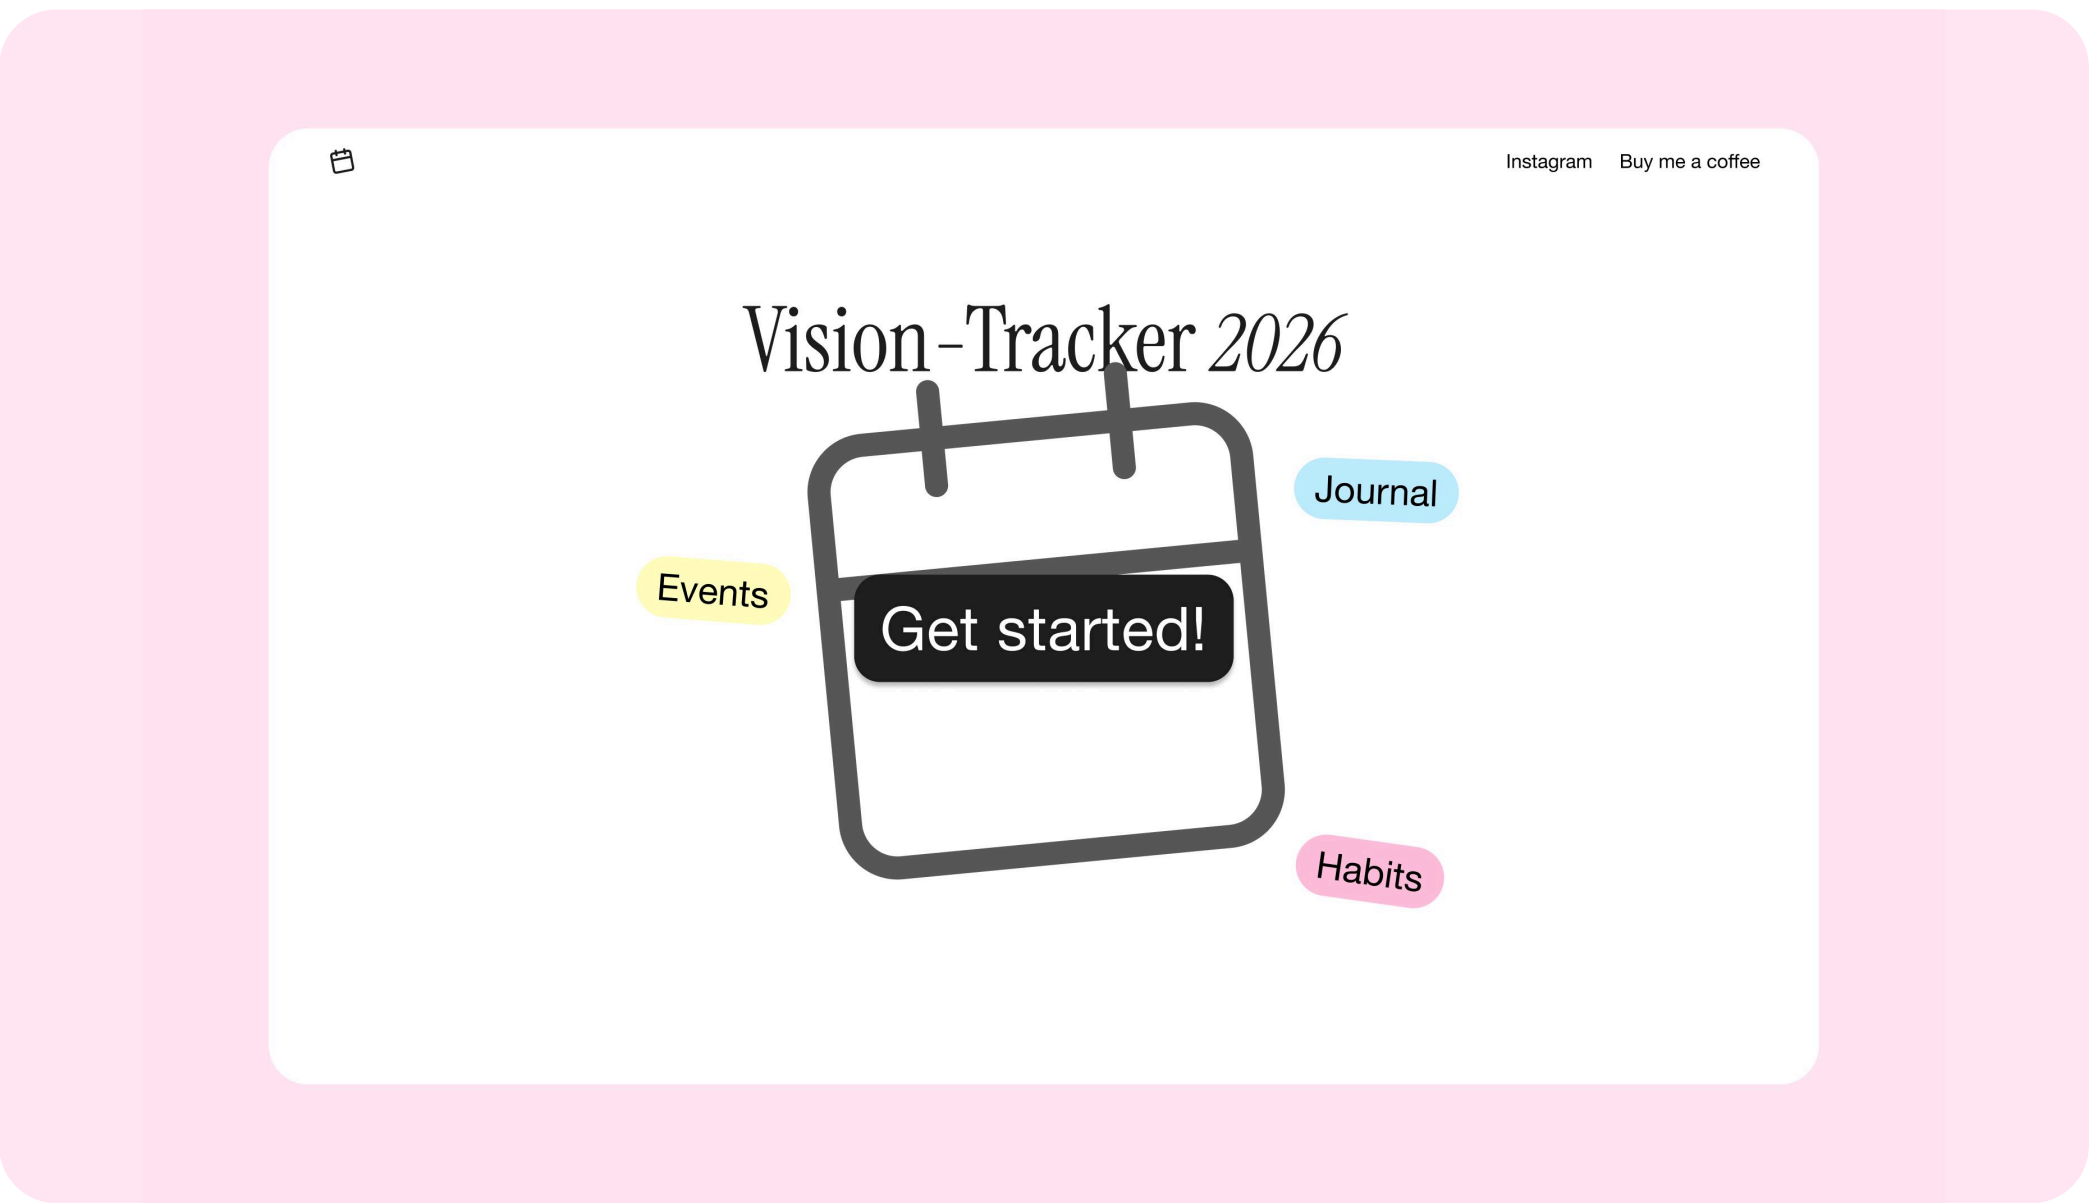
Vision Tracker

A personal productivity web app that makes progress visible - combining journalling, event marking, and habit tracking on a calendar interface.

● Live | Designer & Builder | ~1 week (2025) | Personal Project | Web App | visiontracker.xyz



Summary

Vision Tracker is a personal productivity web app built on a simple insight: people need to see their progress to feel it. Rather than tracking habits in the abstract, Vision Tracker makes progress visible on a calendar - combining journalling, event marking, and habit tracking into a single, calm interface. It works like crossing days off a calendar, but with meaning attached to each day.

Everything I did:

- The product concept and feature scope, focused on three core actions: journalling, events, and habits.
- Planned full user flow with the goal to keep things simple to use, highly visual and free of clutter and friction.
- The landing page design, communicating the value of seeing progress at a glance.
- The calendar-based app interface, where each day reflects journal entries, colour-coded events, and habit completions.
- A live web app launched at visiontracker.xyz, with all three core features operational.

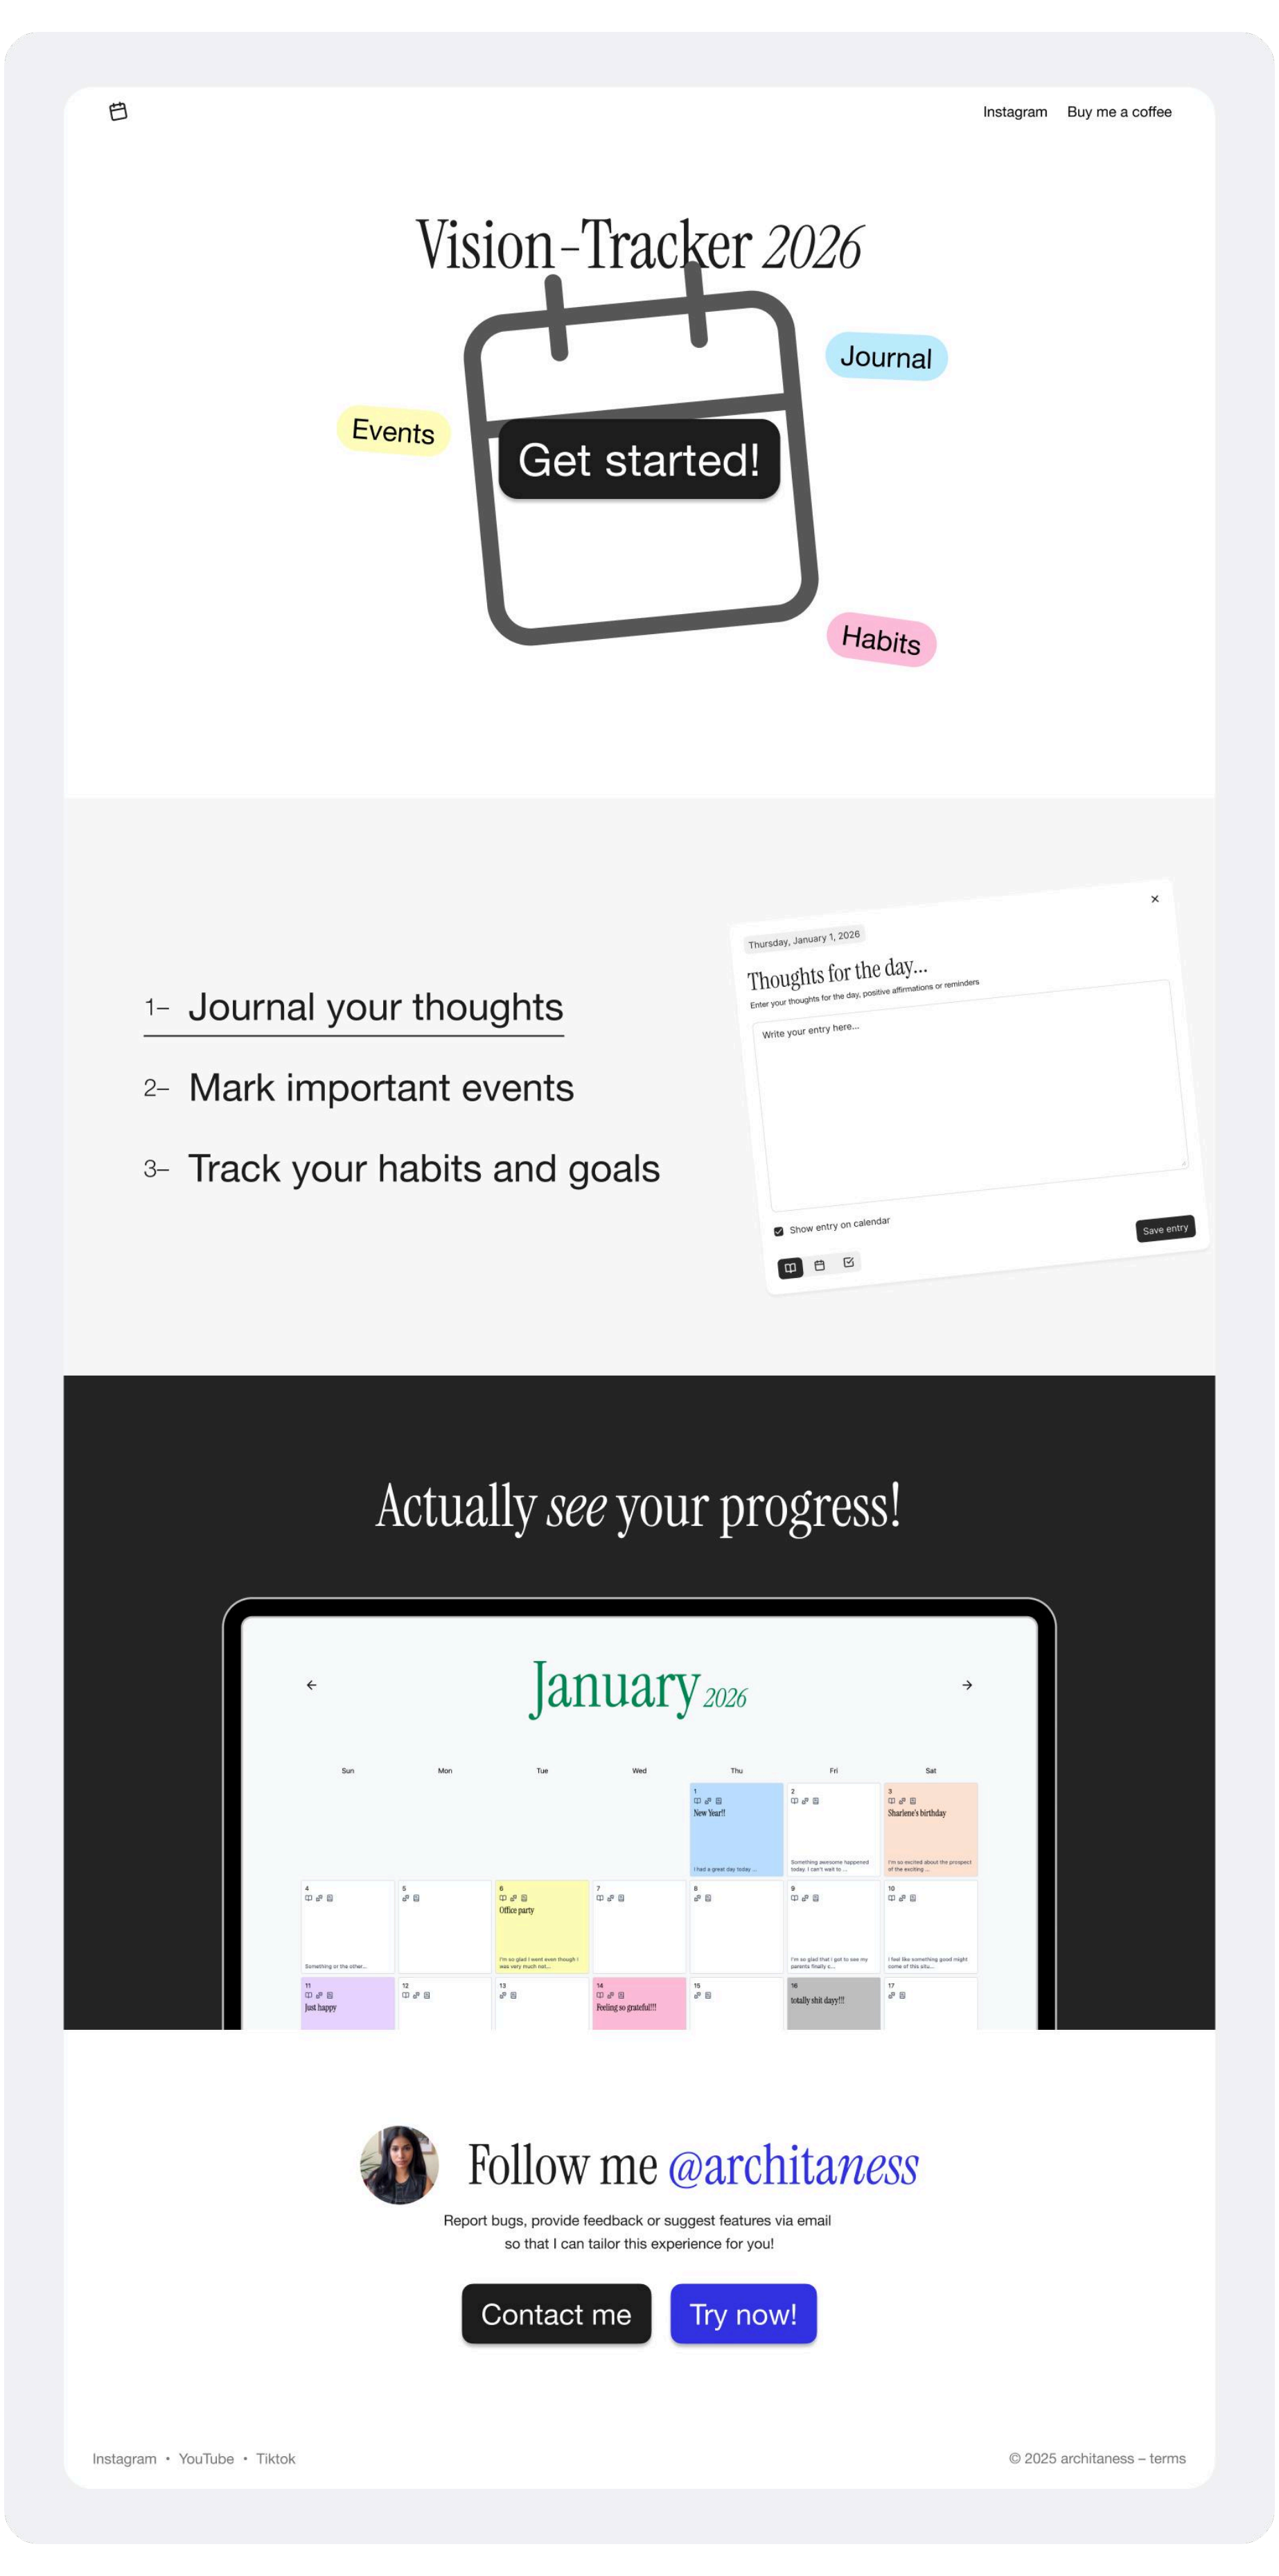
Problem

Most habit and productivity tools are either too complex, require too much daily input, or don't make progress feel tangible. There was no simple tool that let users journal, mark meaningful events, and track habits - all on a visual calendar they could actually see filling up.

Process

1. Defined the product scope around three core features: daily journalling, event/memory marking, and habit tracking. All of which was visible on a monthly calendar view on first site.

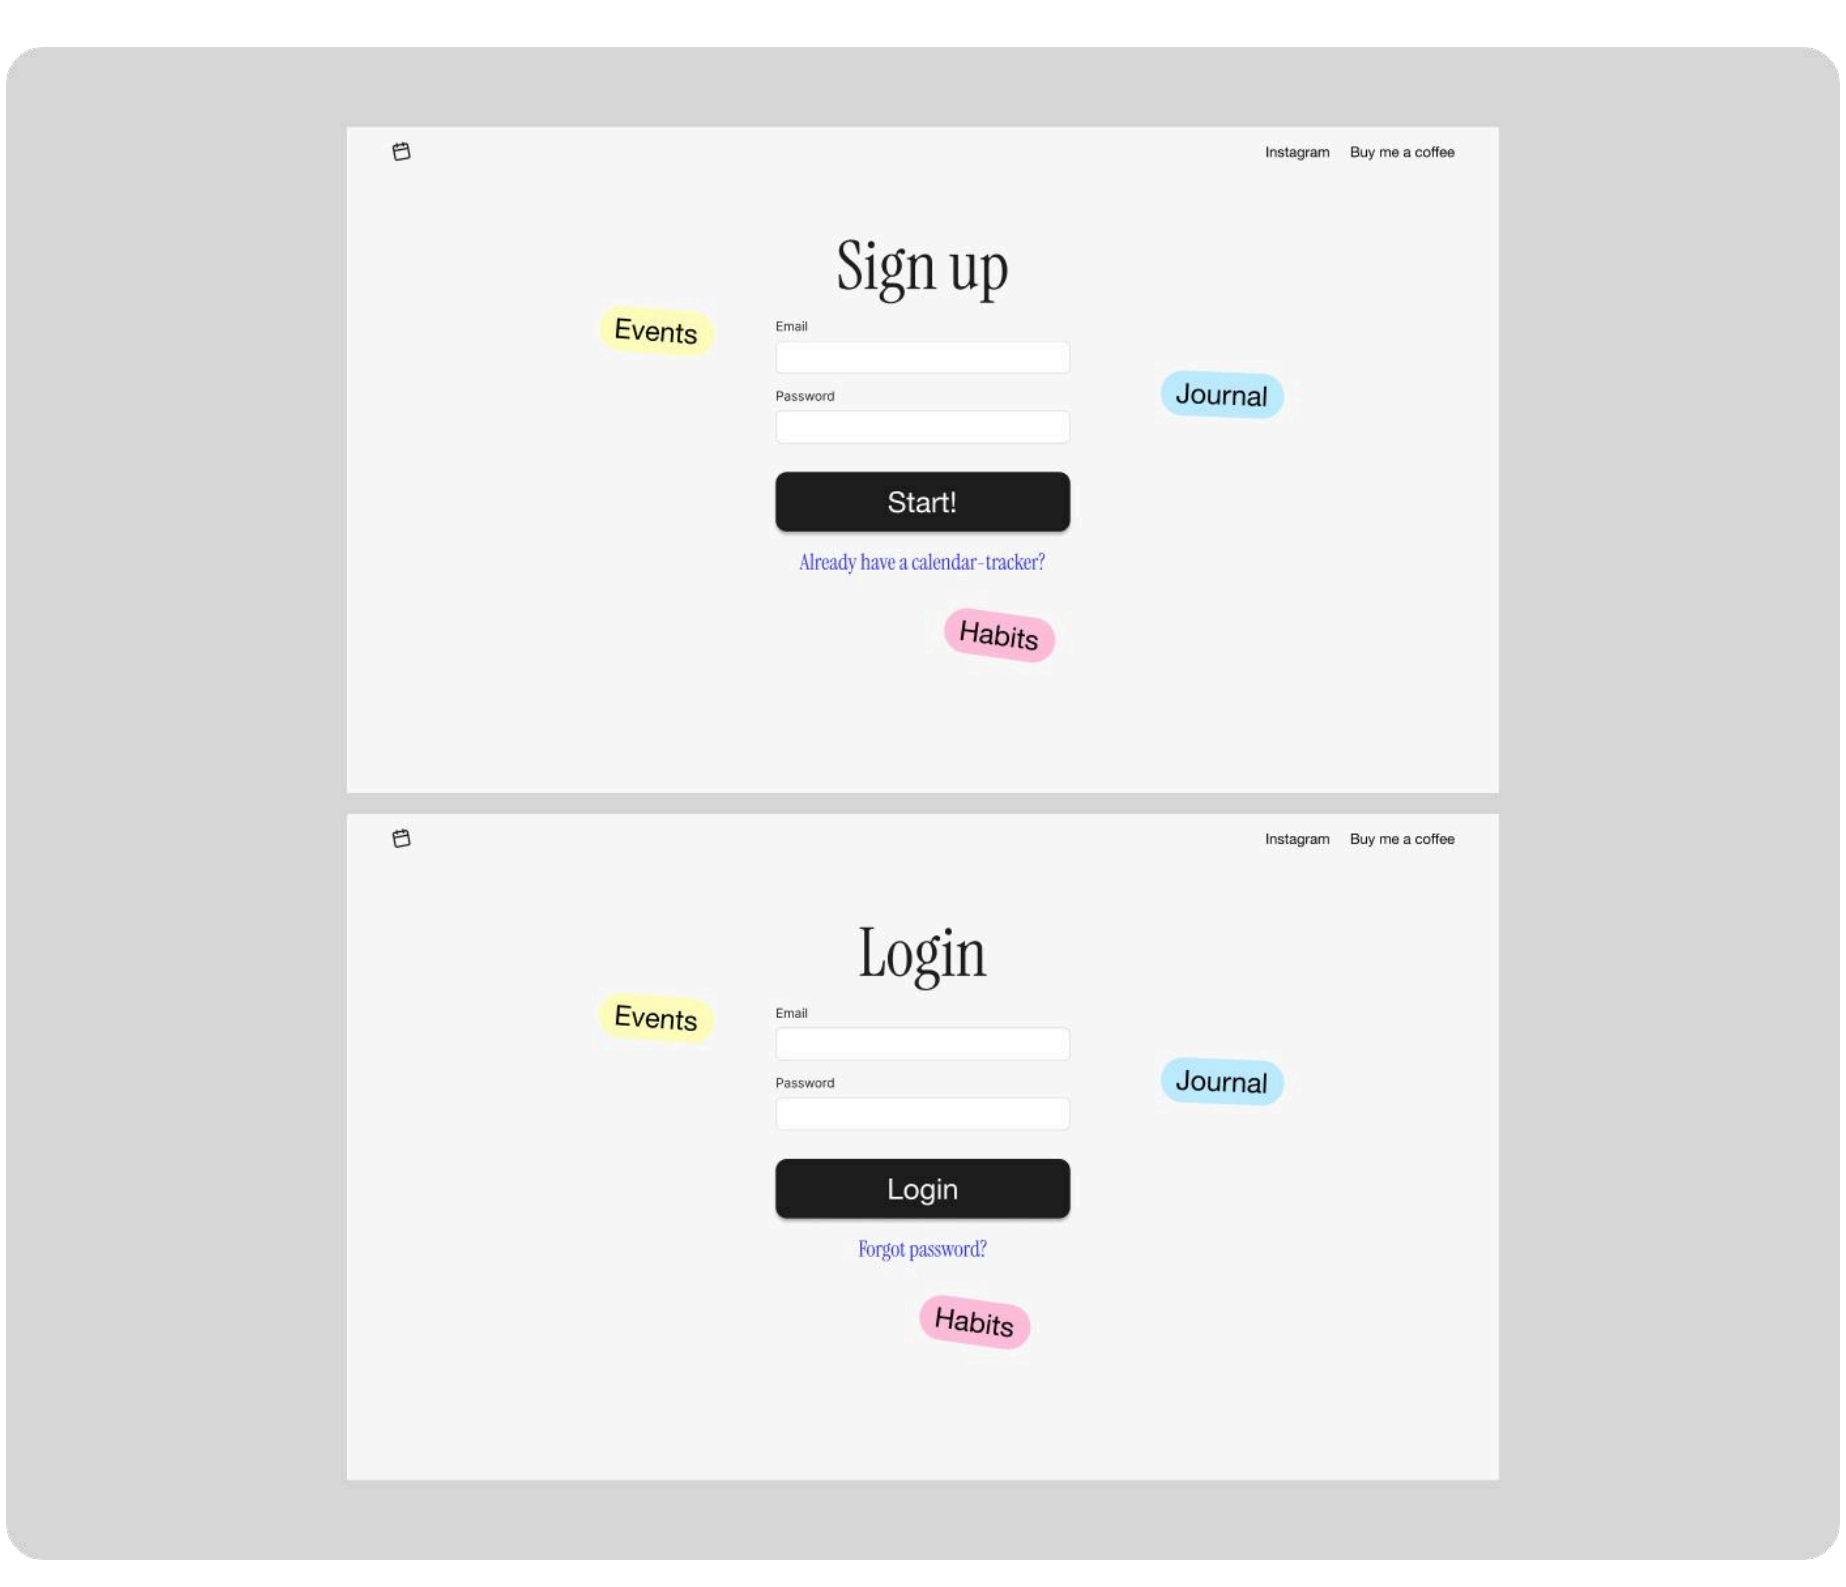
2. Designed the landing page to communicate the core value proposition quickly.



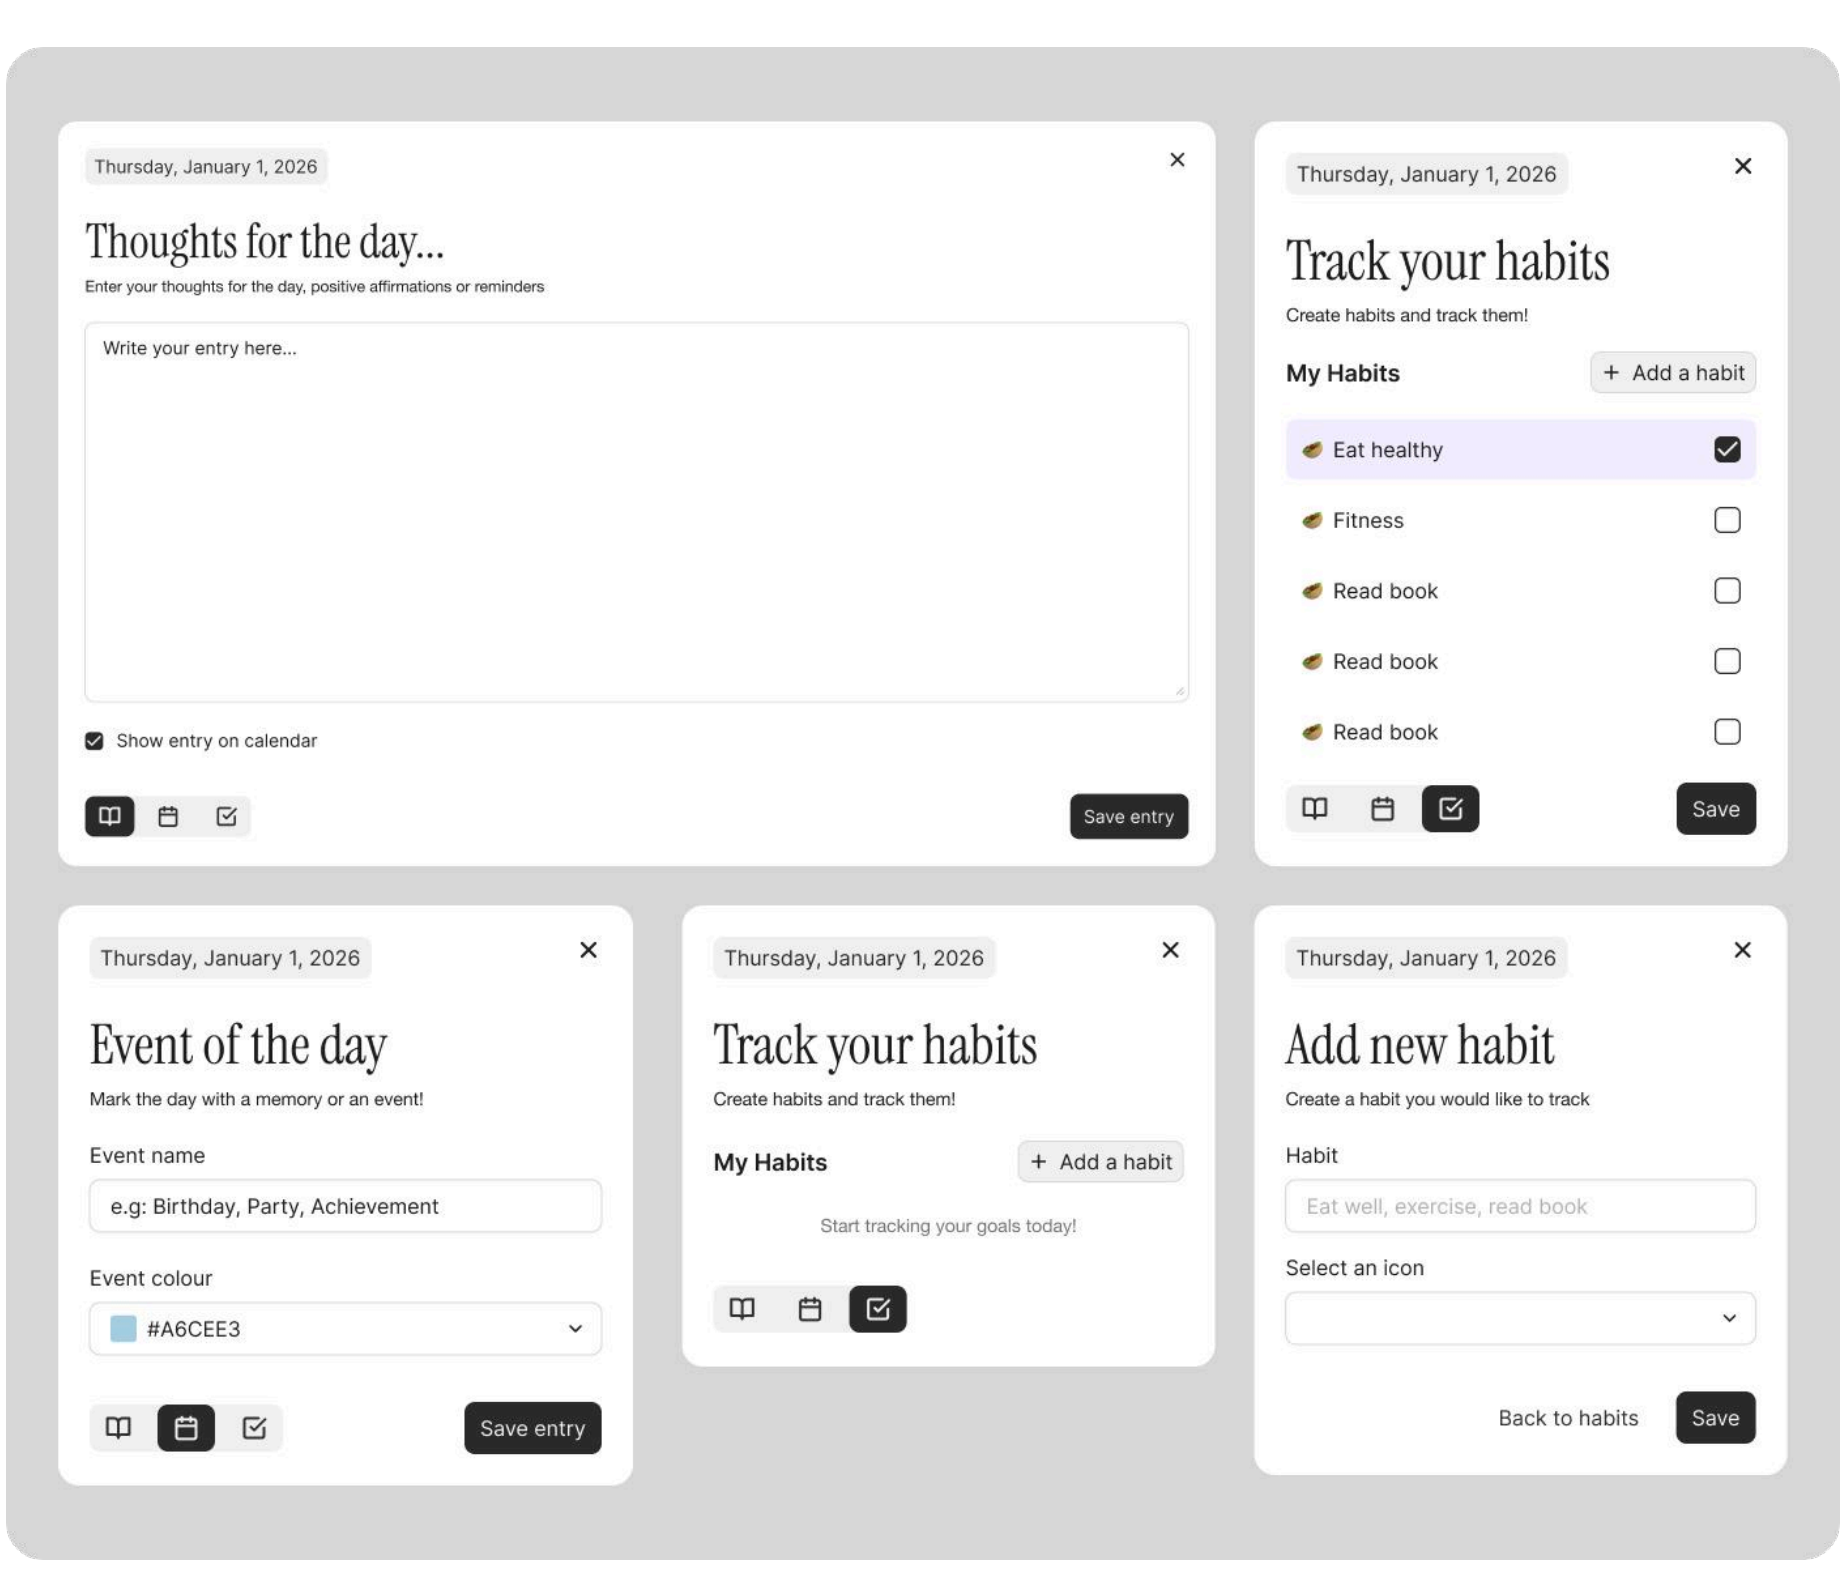
Enter your thoughts for the day, positive affirmations or reminders

Report bugs, provide feedback or suggest features via email so that I can tailor this experience for you!

3. Designed sign up and login flows with full back-end authentication



4. Built pop-up interaction patterns for each feature: Journal (thoughts for the day), Event (name + colour), Habits (create and track).



Enter your thoughts for the day, positive affirmations or reminders

Create habits and track them!

Mark the day with a memory or an event!

Create a habit you would like to track

5. Kept the scope deliberately tight - desktop-only, one core view, three interactions - to ship fast and learn.

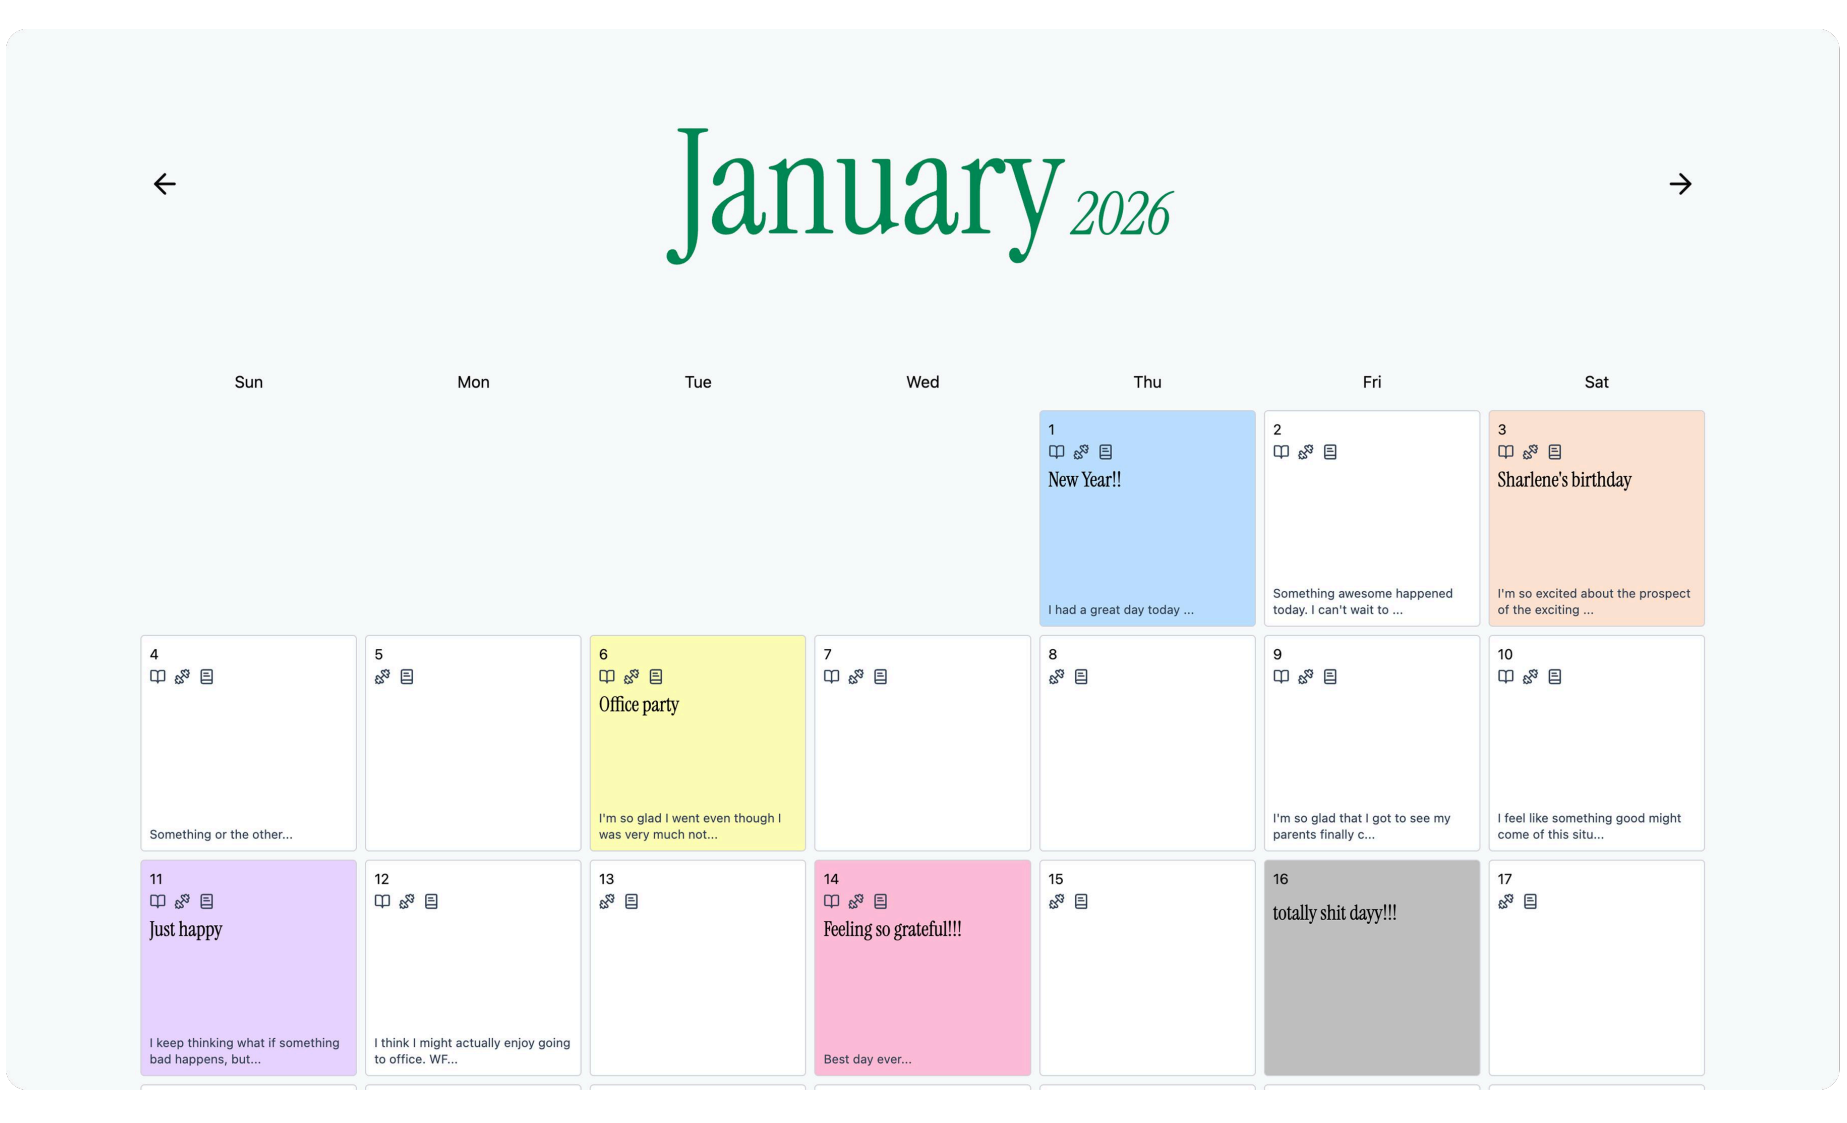
Solution

Landing page clearly communicating the value

Journal your thoughts, mark important events, track your habits - and actually see your progress.

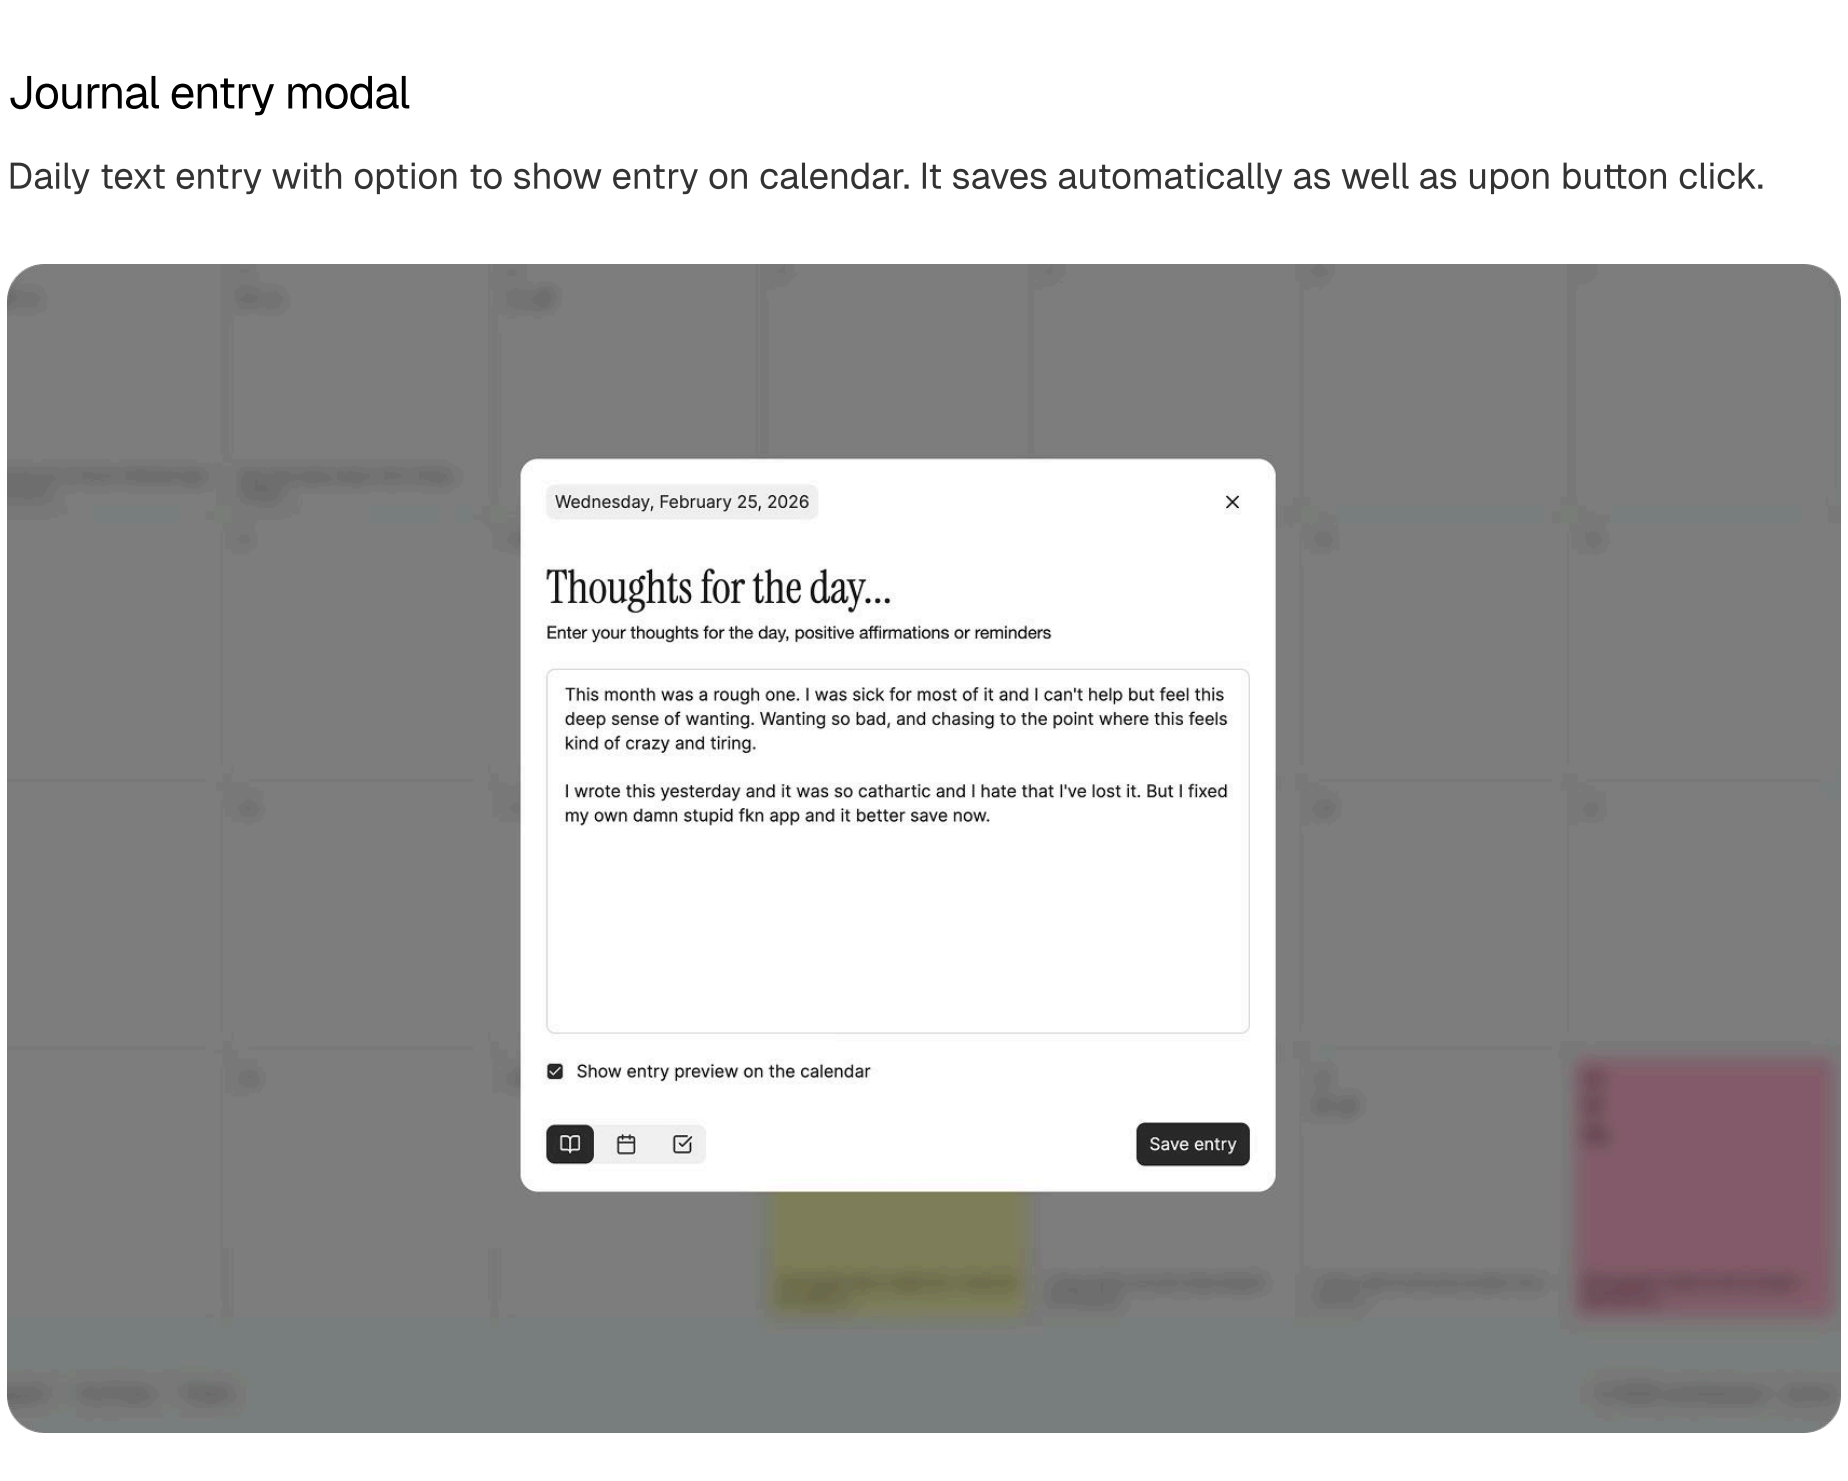
Calendar-based app where each day reflects what happened

Journal entries, colour-coded events, and habit completions.



Journal entry modal

Daily text entry with option to show entry on calendar. It saves automatically as well as upon button click.



Wednesday, February 25, 2026
Thoughts for the day...
Show entry preview on the calendar
Save entry

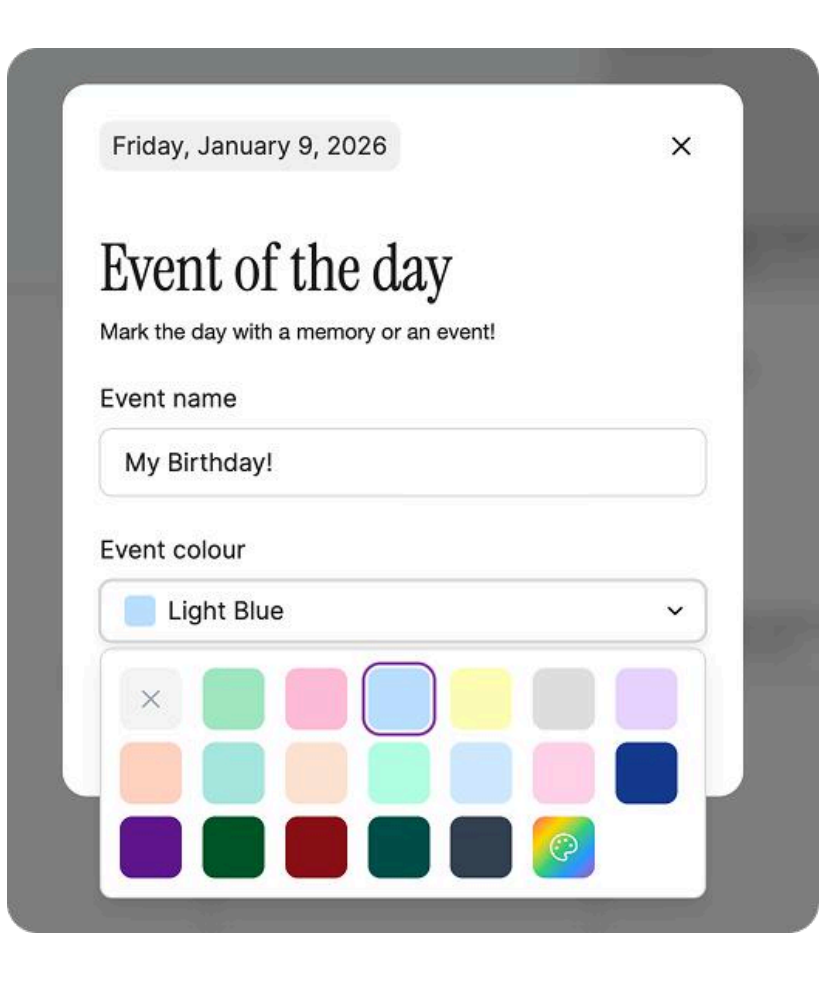
Enter your thoughts for the day, positive affirmations or reminders

This month was a rough one. I was sick for most of it and I can't help but feel this deep sense of wanting. Wanting so bad, and chasing to the point where this feels kind of crazy and tiring.

I wrote this yesterday and it was so cathartic and I hate that I've lost it. But I fixed my own damn stupid fkn app and it better save now.

Event entry modal

Name and colour-code any day - birthdays, achievements, milestones.



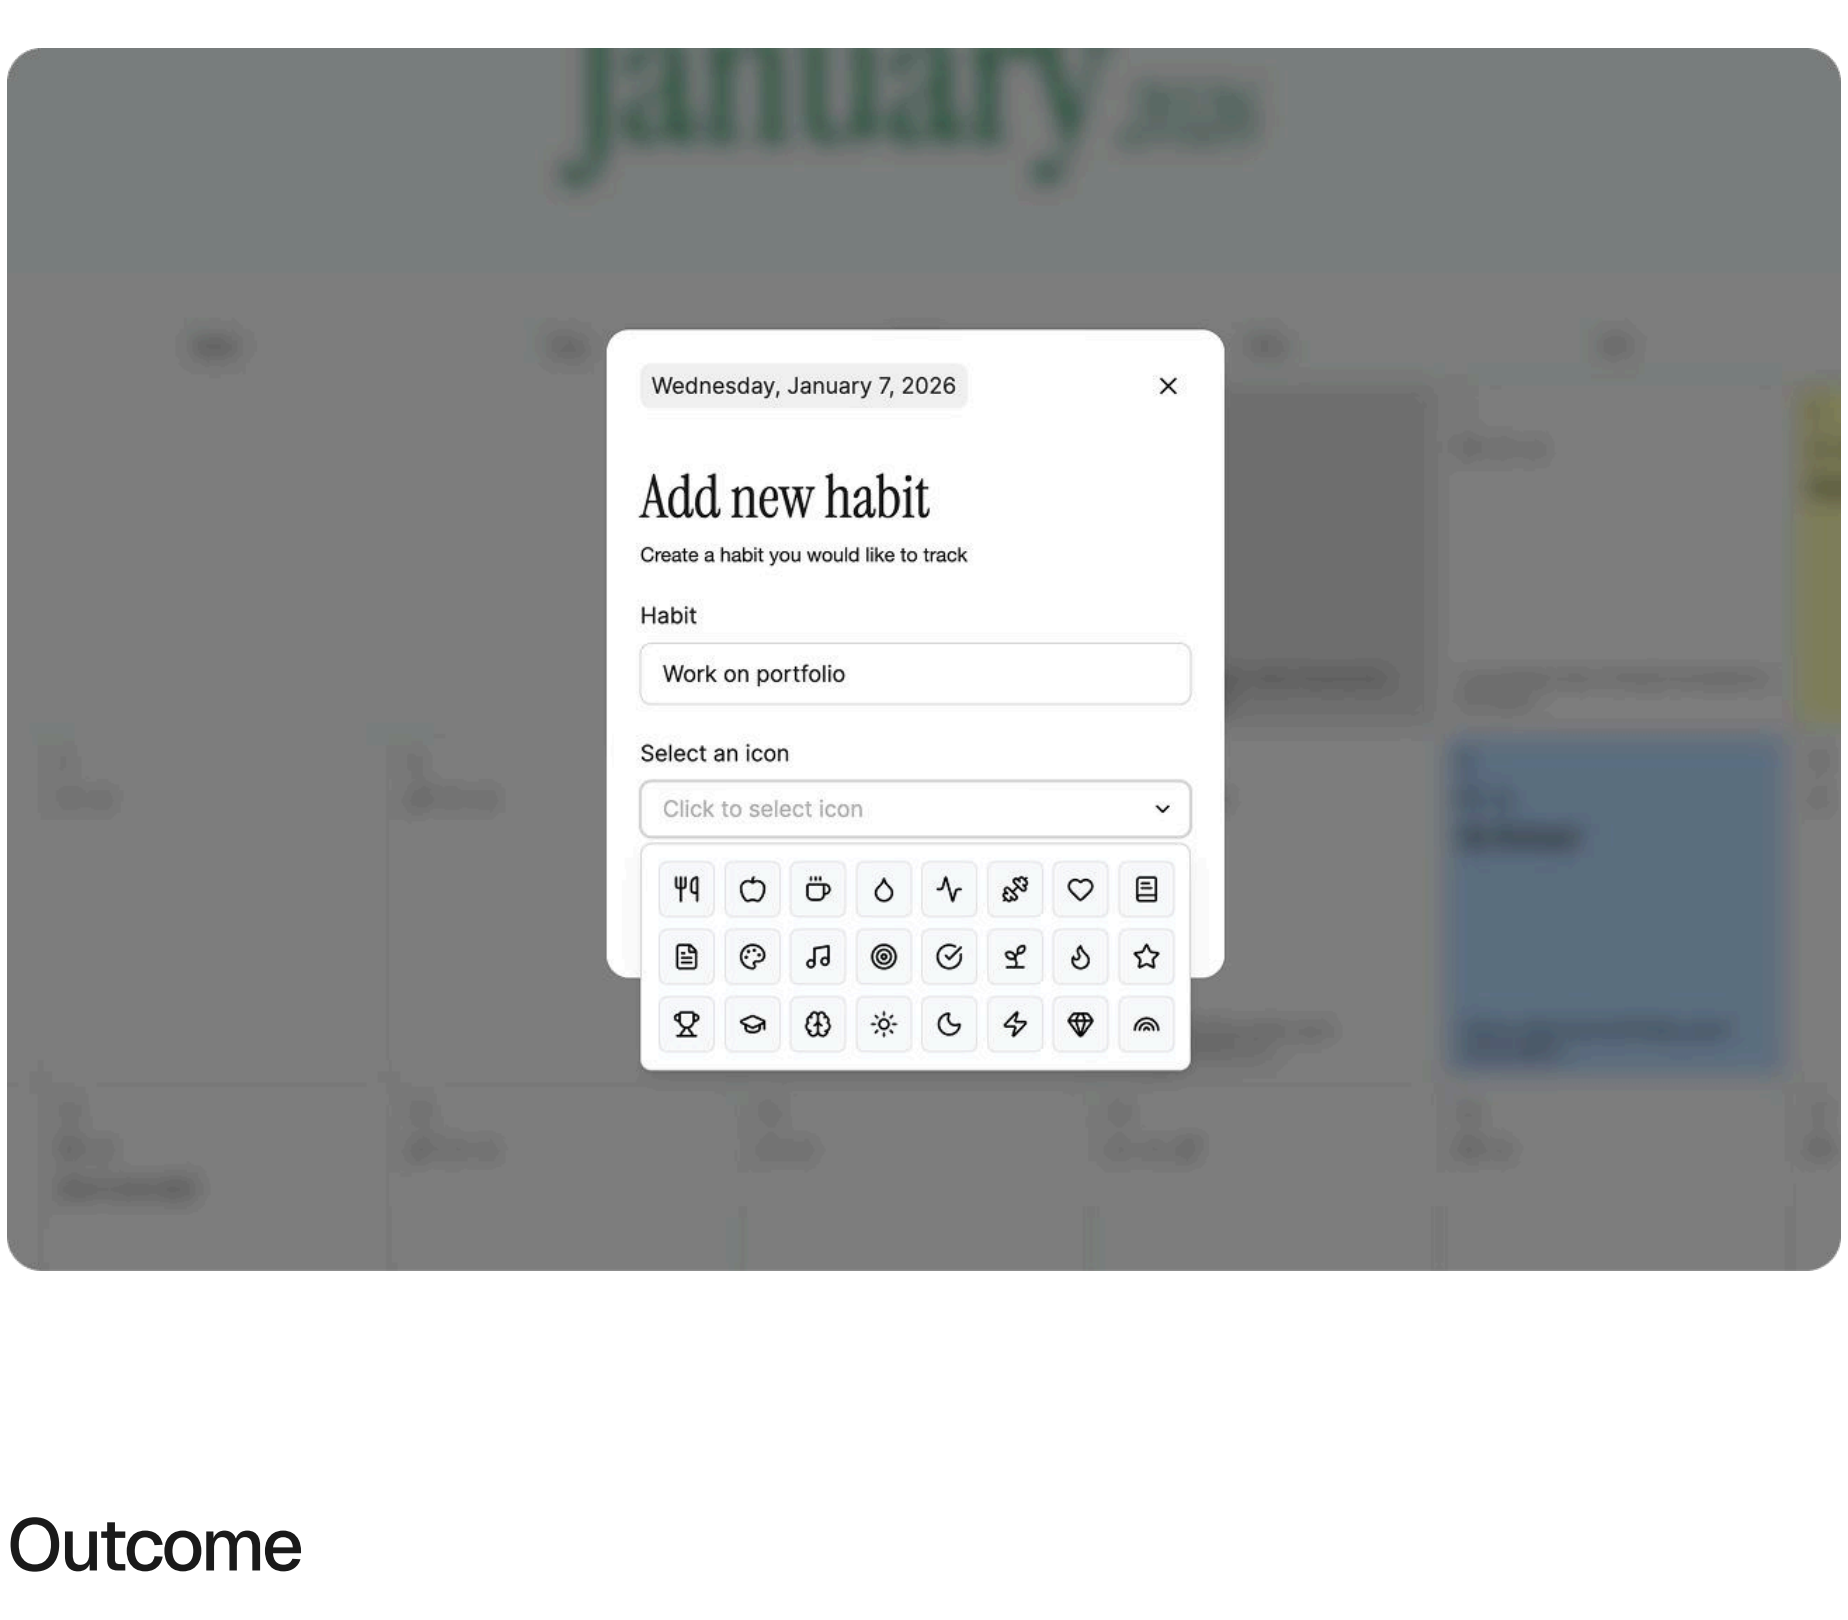
Mark the day with a memory or an event!

Event name: My Birthday!

Event colour: Light Blue

Habit entry modal

Create and check off habits every day.

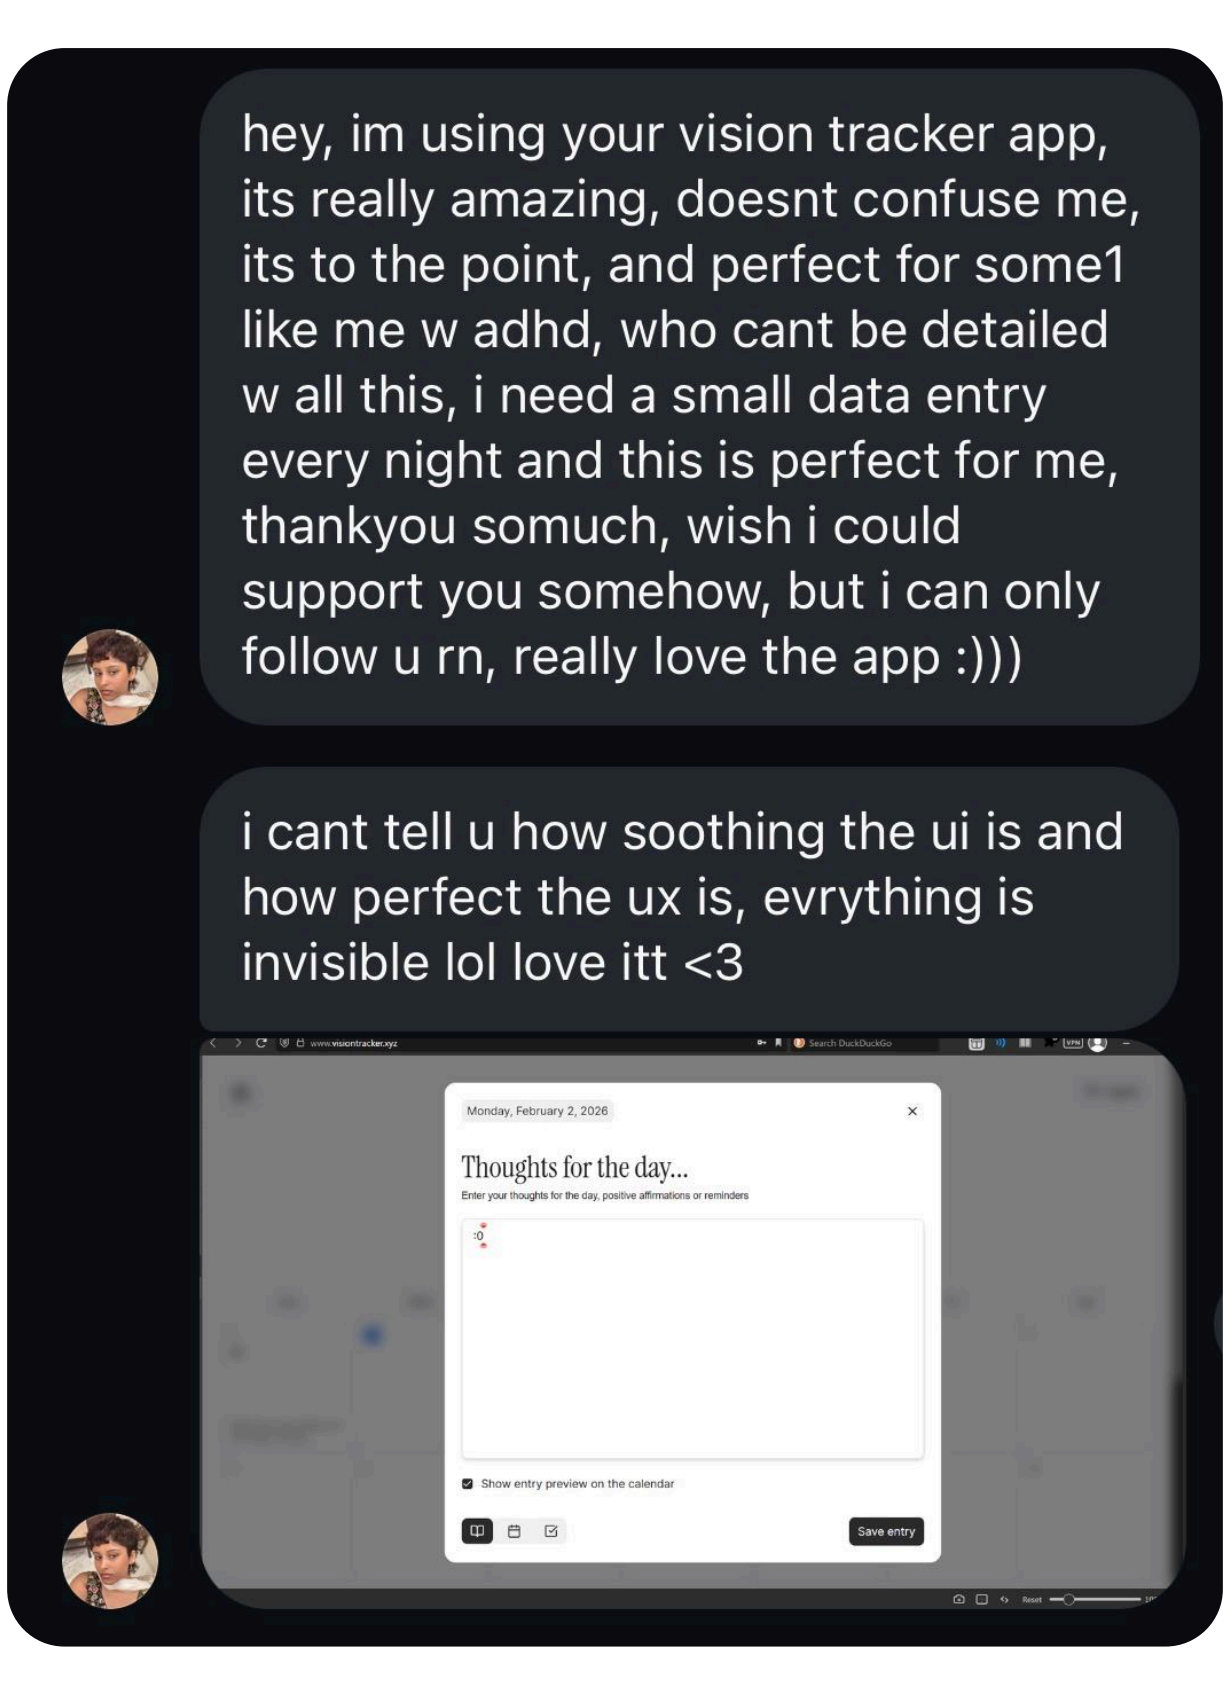


Create a habit you would like to track

Habit: Work on portfolio

Outcome

Designed and shipped within one week - live at visiontracker.xyz



hey, im using your vision tracker app, its really amazing, doesnt confuse me, its to the point, and perfect for some1 like me w adhd, who cant be detailed w all this, i need a small data entry every night and this is perfect for me, thankyou somuch, wish i could support you somehow, but i can only follow u rn, really love the app :)))

i cant tell u how soothing the ui is and how perfect the ux is, evrything is invisible lol love itt <3

- The app has seen 241 entries so far and very good reviews!
